AUGUST 24TH ULTRA COMPACT SURFACES

By Allan Pattee with Cosentino

<http://www.ultracompactsurfaces.com/>

The term "ultra compact surface" is used to describe a completely new countertop surface that is made by putting the raw materials found in glass, porcelain, and quartz, under extreme heat and pressure to create an almost indestructible material. Ultra compact surfaces were created as an improvement to other countertop surfaces like quartz (Silestone®), granite, marble, and solid surface (Corian®).

PLEASE REGISTER
no later than August 19th
